AI product studio — Tokyo

Knowing what to build. Building it right.

DTJ is a senior AI product studio. We co-create AI products and programs with organizations that want to think.

Judgment is the competitive advantage. The tools to create are everywhere; knowing what to create is what sets an organization apart.

What we do

Engineering

AI Engineering

Custom AI software and AI agents from a forward deployed team, with design thinking and engineering in the same people.

AI Literacy

Executive Education

AI judgment for leadership teams. Run inside your organization — for the people who approve, direct, and deliver.

Research

Intelligence on the global AI landscape

High-precision geopolitical intelligence at the speed of global AI transformation.

One team of specialists, with a studio in Tokyo.

We design, build and secure AI products, from strategy to architecture, and every one of us works in the design room and the engineering room.

Our team comes from Fortune 100 research labs, global consultancies and global design agencies, and holds AI patents and invention awards.

Every engagement draws on the whole team. The people who discover the problem build the solution, so the insight survives into the product.

From the studio

Akroma

AkromaIntelligence.com

Akroma delivers high-precision geopolitical intelligence at the speed of global AI transformation.

AI Cards

aicards.designthinkingjapan.com

Every AI solution is built from the same blocks. AI Cards shows how they combine, so leaders architect what gets built.

STATUM Racing

racing.designthinkingjapan.com

An AI race engineer on the driver's radio. It talks during the race, and reads every race after.

Talk to the studio.
